

LEONI
ELEVATORS

Luxury Vertical Solutions

About Us

Welcome to **LEONI ELEVATORS**, where sophistication redefines efficiency in vertical transportation. As a trusted leader in the industry, we take immense pride in revolutionizing how people experience vertical mobility. Our dedication to sustainability and cutting-edge innovation distinguishes us as the elite choice for luxury, energy-efficient elevator solutions.

At **LEONI ELEVATORS** elevators are more than mere infrastructure—they are symbols of modern luxury, delivering a seamless blend of eco-conscious engineering and enduring performance. Our seasoned experts leverage decades of experience and a passion for green innovation to install each lift as a bold step toward a sustainable future.

Key Highlights

- **Innovative Technology:**
 - We utilize the most advanced elevator technologies to deliver world-class, energy-smart lift systems that maximize efficiency, operate whisper-quietly, and perform at the highest standards with minimal energy consumption.
- **Sustainability Focus:**
 - Central to our philosophy, our energy-efficient lifts significantly cut carbon footprints and operational costs, setting new benchmarks in sustainable luxury.
- **Customized Solutions:**
 - Every client is unique. We collaborate closely with you to design bespoke elevator experiences, ensuring each LEONI system seamlessly complements your architecture and vision.
- **Reliability and Safety:**
 - Our lifts meet the highest global safety standards and deliver flawless, reliable operation—ensuring every vertical journey is secure and serene.
- **Customer-Centric Approach:**
 - Your satisfaction is our priority. From personalized consultation to flawless installation and lifelong support, the LEONI team anticipates and addresses your needs with professionalism.

Elevate your expectations—discover how “LEONI ELEVATORS” merges performance, safety, and environmental distinction for a truly premium experience.

Mission and Vision

M

Mission is to revolutionize vertical transportation by providing cutting-edge elevator solutions that prioritize safety, efficiency and sustainability. We are committed to enhancing the quality of life for our customers, creating innovative products, and setting new industry standards through exceptional service and continuous improvement.

V

Vision is to be the global leader in elevator technology and services, we envision a future where our elevators redefine urban mobility, contribute to environmentally conscious urban landscapes, and empower smart and connected cities. We aim to be the preferred choice for our customers, employees and partners, recognized for excellence in design, reliability and customer satisfaction.

Efficient & Innovative

Safety

Reliable & Responsive

Ensuring Energy Efficiency

Reduced Energy Consumption:

Energy-efficient elevators use advanced technologies such as regenerative drives, energy-efficient motors and LED lighting to minimize energy consumption during operation. This results in lower electricity bills and reduced overall energy demand.

Environmental Impact:

Elevators contribute to a building's carbon footprint, especially in high-rise structures. Energy-efficient elevators help reduce greenhouse gas emissions, contributing to environmental sustainability and the fight against climate change.

Operating Costs:

Energy-efficient elevators often have lower operating costs over their lifespan. Although they may have a higher upfront cost, the savings in energy bills and maintenance costs can lead to a positive return on investment in the long run.

Technological Advancements:

Ongoing advancements in elevator technology, such as the use of permanent magnet motors, variable frequency drives and intelligent control systems, contribute to improved energy efficiency. Upgrading to newer elevator systems can enhance the overall energy performance of a building.

User Awareness:

Building occupants and users are increasingly conscious of sustainability and energy efficiency. Having energy-efficient elevators aligns with the preferences of environmentally conscious individuals and organizations, enhancing the marketability of a building.

Innovation and Competition:

Elevator manufacturers are continuously innovating to create more energy-efficient solutions. The competition in the industry encourages the development and adoption of new technologies that enhance the energy performance of elevators.

Long-Term Sustainability:

Energy-efficient elevators contribute to the long-term sustainability of buildings, aligning with global efforts to create more environment friendly and resource-efficient urban environment.

Energy Efficient Motor

PMSM MOTOR

Permanent magnet synchronous motors (PMSM) are typically used for high-performance and high-efficiency motor drives. High-performance motor control is characterized by smooth rotation over the entire speed range of the motor, full torque control at zero speed, and fast acceleration and deceleration.

Voltage : 380V Three Phase
Power : 2.8 KW
Usage : Lifts/Elevators
Features : Easy to install, low weight, Gearless
Frequency : 24 HZ

Gearless Elevator Machine is without reduction gears as in a high-speed electric elevator drive in which the driving sheave is mounted directly on the armature shaft.

In Modern Era, Gearless designs are being used in the tallest structures of World

Current : 8 amp
Duty : 408 Kg
Torque : 220 NM
Brake Voltage : 110V DC
Motor Type : Elevator motor

PROGRESSIVE SAFETEEY GEAR

The instantaneous or progressive safety gear, together with the overspeed governor, plays a key role in the safety of the elevator and the people inside of it. It is a safety device, directly related to the overspeed governor.

Enhanced Safety

Infra Red Door Sensors

Door sensors (sometimes known as photoelectric or infrared beam, electric safety door edges, door detector, electric proximity edges or electric doorman) is an elevator device that detects a passenger or an object on the door way which prevents the doors from closing

For all the elevators with the door sensors may need an independent power supply to make the sensors work. Door sensors usually work with a pair, The transmitter unit (or TX unit) which presents the infra-red beams to the receiver unit (or RX unit) to receive the infra-red beams and make the sensors working.

Door Closing Mechanism

The doors on the cars are operated by an electric motor, which is hooked up to the elevator controller. The electric motor turns a wheel, which is attached to a long metal arm. The metal arm is linked to another arm, which is attached to the door. The door can slide back and forth on a metal rail.

Hydraulic Manifold

A hydraulic manifold is a component of a hydraulic system that controls the flow of fluid and thus the transfer of power between actuators, pumps and other components. Hydraulic valves direct the flow of pressurised fluid to a working device such as a hydraulic cylinder or motor.

ELV (Emergency Lowering Valve)

These systems play a crucial role in ensuring the safety, efficiency and functionality of various building functions beyond standard electrical power distribution.

These systems are designed to operate at voltages significantly lower than the typical power supply, usually below 50 volts AC or 120 volts DC.

Hydraulic Lift Block Valve

This a reliable and efficient tool designed and tested to ensure optimal performance and functionality. This valve is easy to install, providing safe and reliable operation.

With its straight forward design and installation, this valve will provide increased safety and efficiency.

USHA MARTIN ROPES:

We offer a range of high-quality lift ropes, ensuring superior performance and high order of safety requirements. These products are manufactured in advanced state-of-the-art technology and undergo strict quality control measures. Elevator hoisting ropes are designed with close dimensional tolerances to facilitate the jerk-free movement of elevators.

These quality systems have been accredited by **ISO 9001:2008 and ISO 14001:2004.**

The elevator ropes are designed to meet desired OEM specifications, which are available as the elevator Hoist ropes, Compensating ropes, Governor ropes and Control ropes used in traction drive elevators and roped hydraulic lifts.

USHA MARTIN Elevator ropes finds application in the following:

Hoist rope

Compensating rope

Governor rope

Control (Door closing rope)

SAW ELEVATORS

Lift Rope

Size Range:

3 mm to 20 mm

As a leading elevator wire rope manufacturer USHA MARTIN is positioned as one of the most preferred brand in the international market today.

Leoni Elevators Emergency Rescue Device

In the event of a main power supply failure, Leoni Elevators lifts automatically move to the nearest floor level. The automatic door opens, allowing passengers to exit safely. For lifts equipped with automatic doors, if a power failure occurs while at floor level, the door will remain open for safe evacuation.

Our Vertical Transport Mechanism

01

INTELLIGENT DESIGN

New generation disc brake technology ensures good ride quality and intelligent landing with smooth ride

02

SPACE-SAVING

This design eliminates the need of machine room and provides room for creativity in limited spaces for modern architecture

03

MAGNETIC DRIVE

This means no tooth-wear, no need to change the oil on regular basis, long service life and without maintenance

NOISE AND VIBRATION CONTROL

Streamlined car structure, sealed car enclosure, re-inforced multiple connections and wrapped-on moving parts. These prevent noise and vibration leading to a peaceful environment.

PRICE AND OPTIMAL CONTROL

The digital closed-loop variable frequency (VF) drive, with vector control, further increases efficiency and accuracy. A digital speed encoder correct car speed and positioning.

ROBUST ELEVATOR SYSTEM

The intelligent controller which encapsulates our core value, has a safety chain in line with international code requirements, to avoid any unexpected error. Proper system design is done to ensure it meets customers requirements and safety standards

**Superior performance by which elevator
can achieve over 40% energy saving**

GRAND ENTRANCE

Door Opening

Clear Opening - 800mm

Types Of Cabins

Elevator Car

- Cabin
- Colours
- Ceiling
- Flooring
- Powder Coated MS, GI, SS, Wooden Finish
- Customer Choice
- Painted, Steel with Fan and Standard Lights
- PVC/Matt
